ODO**10**

---

2 Charging the ODO**10**

► First time using the ODO**10**

Using the Mini-USB connector, recharge the ODO**10** with the power cable. Charging time is approximately 4 hours.

The on screen battery indicator will flash, indicating that the battery is recharging.

---

3 Helpful Tips

► Keep it plugged in!

The device should always be plugged in the vehicle using the accessories supplied.

The battery indicator will be sequentially flashing 3 bands inside the battery icon. Avoid placing the ODO**10** near other devices such as cell phone or GPS.

► On the road

When selecting a trip type, press on the appropriate button until a beep is heard. This step should be approximately 3 to 4 seconds long and an on screen message will also appear on screen. Note that this procedure (with the exception of the end trip button) can be undertaken at any time during the trip, from beginning to the end. You can also log onto your online ODOTRACK account after the trip, and make a modification if needed.

The device will beep regardless of whether or not an active choice was made for any trip type. The beep will be heard about 30 seconds after the vehicle has started to move.

You are not required to select trip type every time you travel. The ODOTRACK device will choose the previous selection by default.

For more information or to see your logs, please visit www.odotrack.ca

---

4 Ready to go!

► Get in your car, we are going for a ride!

Your ODO**10** is now ready to log all your travel. Press the [ ] button or the [P] button to choose the type of trip.

---

5 Consult all your trips

► Consult the online ODOTRACK application www.odotrack.ca/login to view or print your travel reports.

WARNING: The password is case sensitive.

---

6 Explanations
