

ODOTRACK : VOLUNTARY SIMPLICITY

LAVAL, March 19th 2010: This week, LOGICIEL FISCAL VL INC. deployed the new module “Favorites” from the Odotrack technology. With its automatically generated comments for identified locations, the new module makes it even easier and quicker for users to hold their logbook complying with governmental requirements.

Always striving to further facilitate the fastidious administrative task of keeping a logbook, the “Favorites” module was the next logical step to the development of the Odotrack technology. “With this new module, we once again, increase the simplicity and most importantly the efficiency of Odotrack”, as defined by the engineer behind this technology.

The government has set precise regulations

As per the Income Tax Act, a logbook used to justify the expenses for a motor vehicle **must contain not only the coordinates and mileage of each trip, but also the purpose of the trip**. In the case of an incomplete or inexistent logbook, the taxpayer faces the possibility of having their deductions refused and having to pay penalties.

About Odotrack

Odotrack is a portable device that automatically calculates all travels for business or personal purposes. Before leaving, the user simply has to select the type of trip, business or personal, and the rest is done automatically!

Not only does the Odotrack technology provide you with a logbook compliant to governmental requirements, but it also contains many other applications to help you simplify the management of travels. You will be able to, among other things, manage vehicle expenses, generate a variety of tax and management reports with *one click*, and visualize your route on a map.
